## Not-systematic review

TABLE 2. Meta-analytic Common Interruptions Research Questions Posed by Different Communities of Practice

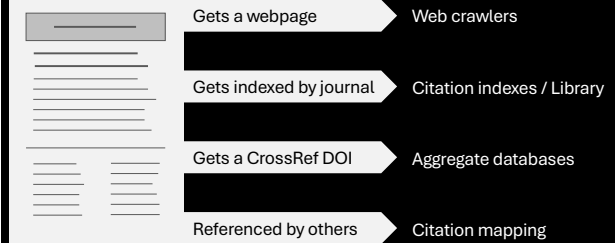

Meta-analysis	Q1. Why Do Interruptions Occur?	Q2. How Should We Describe the Properties of Interruptions?	Q3. What is the Impact of Interruptions?	Q4. Is There Evidence of a Relationship Between Interruptions and Error?	Q5. Are Interventions Evidenced as Reducing Negative Effects of Interruptions?
Applied Cognitive Psychology	(What key concern simply assumed that they do occur)	What is the modality, duration, positioning, and similarity to, interruptor, etc?	What exact effects do interruptions have on people's cognition?	What evidence exists and how can cognitive theory explain the evidence?	What properties preserve people's ability to resume interrupted tasks successfully?
Epidemiology	What are the sources of interruptions in terms of roles, locations, and?	Who is interrupting when, for how long and how often, in a given context?	What is the burden of the impact on clinical workflow, etc?	What is the best evidence that can be collected from the evidence?	(What key concern, with new evidence?)
Quality Improvement	Are some interruptions particularly disruptive to clinical workflow?	(What key concern?)	(Assumed that interrupting impact will usually be negative)	(What key concern, assumed that a relationship exists)	Can interventions be evidenced with bounded sets of interventions?
Cognitive Systems Engineering	What system functions do interruptions represent?	What is the motivation of the interruption, with respect to system functioning?	What is the impact on work systems and work tasks within work systems?	Given complexity of health care workflows, is the relationship strong or weak?	When are interventions warranted?

7

## Literature discovery

8

## Literature discovery

Gets a webpage Web crawlers

- Largest database (~390 million records)
- Quick and easy to use
- Free
- Requires separate app to export results
- Very limited advanced search
- Includes trash

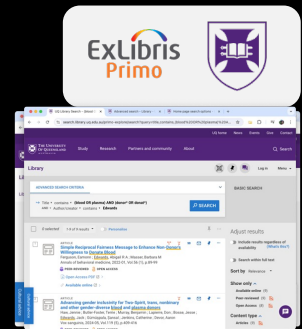

9

## Literature discovery

Gets indexed by journal Library

- Get access to paper through UQ
- Search multiple mediums
- Decent advanced search
- Can export results
- Missing some search fields
- Can't be replicated outside UQ

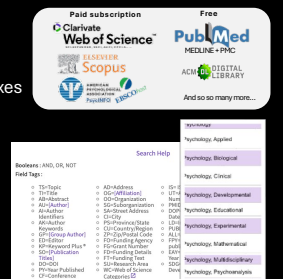

10

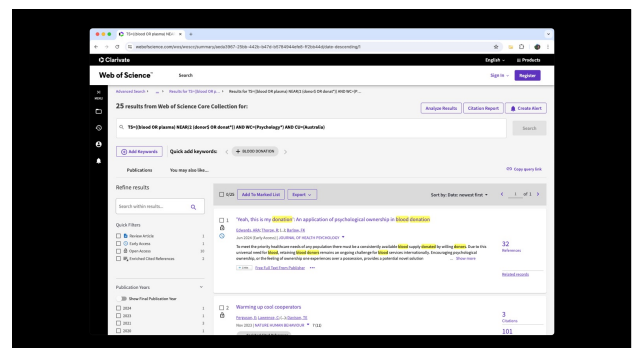

## Literature discovery

Gets indexed by journal Citation Indexes

- Lots of metadata
- Powerful advanced search functions
- Can export search results
- Can be discipline-specific
- Some will require institutional login
- May be slow and cumbersome

11

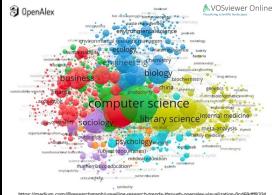

12

### Literature discovery

Gets a CrossRef DOI → Aggregates

- Break up knowledge monopolies
- APIs for if you're making a tool
- Hard to know database's scope
- Not as many fields to search in

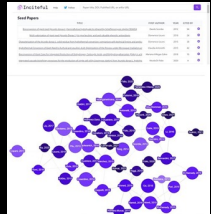

Logos: ORCID, OpenAlex, Dimensions, SEMANTIC SCHOLAR, LENS.ORG, OpenAlex, AVOSviewer Online

13

### Literature discovery

Referenced by others → Citation mapping

- Visually explore papers
- Add papers to map
- Can export results
- Most are free
- Algorithm can be opaque

Logos: Inciteful, Litmaps, ResearchRabbit, OPEN KNOWLEDGE MAPS, CONNECTED PAPERS

14

### Actually getting the fulltext

Library, EndNote/Click, Google Scholar, Request, Open-Access, Internet Archive, Wayback Machine, Traverse the high seas

15

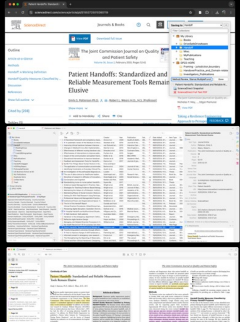

### Reference Managers

**zotero**

- Free and open source
- Very flexible – integrates with everything
- Large community of plugin developers
- Decently powerful annotations

Alternatives:

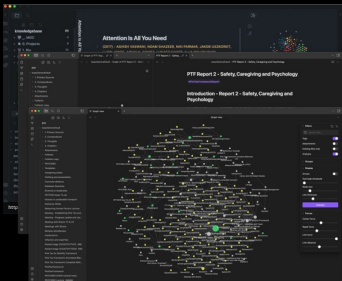

- Endnote – UQ license, but owned by Clarivate
- Mendeley – Free but owned by Elsevier
- Papers – Pretty but not free and less popular
- PaperPile – Also pretty but not free
- JabRef – Less popular, fewer resources

16

### Data extraction

- Tables
- Networked notes
  - Obsidian, Roam, Notion
- QDA
  - Nvivo, MAXQDA, Leximancer
- Paper
  - Sticky notes, whiteboards
- Generative AI
  - ChatGPT-4, Elicit, Perplexity
  - Paper Digest, Scite.ai, Jenni.ai
  - Paperpal, SciSpace, OpenRead
  - ExplainPaper, Eimbiok, Taviy
  - Powerdrill, NextNet, ChatPDF, Heuristi.ca

17

### In sum

- Plan ahead for systematic reviews
- Literature can be explored with new tools like citation mapping
- Zotero is the superior reference manager
- Be intentional about what you are offloading to generative AI

*How do you do your literature reviews?*
